EXPERIMENTAL LEARNING

Experimental learning is learning that takes place in a space where students can observe, practice, and experiment with objects, materials, phenomena, and ideas either individually or in groups.

Within the Experimental, learning may occur in many ways, often through observing a case or phenomena, performing hands-on practical trainings, or conducting experiments. The primary aim of arranging Experimental learning for students is to develop the practical competence often within their area of specialization. Experimental learning provides opportunities for students to relate and reinforce the theoretical concepts taught in class. It also targets a range of learning outcomes including experiential learning.

Experimental learning states the objective of the experiment and provides the reader with background information. Provide background theory, previous research, or formulas the reader should know.

The students of Under Graduation (I B.Sc., II B.Sc., & III B.Sc. Computer Science) and Post-Graduation (I M.Sc., II M.Sc. Computer Science) experience the experimental learning by working out the application programs in our Computer Lab.
